

Coconut Inflorescence Based Products

a) Neera

Neera is a sweet oyster white, translucent, and highly nutritious extract collected by slicing the spathes of coconut and palm trees. It is a sugar containing juice and a rich natural source of minerals, vitamins and amino acids. A recent study conducted by the Indian Institute of Science; Bangalore shows that Neera can help cure liver diseases. The study proves that Neera is particularly useful in treating liver diseases following consumption of alcohol. The magical property of Neera to remove “acetaldehyde” (the toxic metabolic product of ethanol causing liver damage) was proven in the study. It has also been shown to boost the activity of a normally functioning liver. It is tapped from the coconut inflorescence and is filtered, pasteurized, and bio preservatives added to preserve the product.

The unit may require water around 40 kilo litres per day. Additive required is preservatives/anti fermenting agent/deodorizing agent.

b) Toddy

Toddy is also a product from coconut inflorescence. It is obtained by fermenting sap collected from the inflorescence.
